PROFESSIONAL SUMMARY

Computer Engineering student at ADA University and AI & Cybersecurity Intern at RAM Holding, a diversified group of 15 companies. Combines hands-on DLP monitoring, SIEM log analysis and network monitoring in a live enterprise environment with practical AI work: deploying local LLMs, building chatbot integrations and benchmarking speech-to-text models for Azerbaijani.

EXPERIENCE

AI and Cybersecurity Intern

July 2026 – Present

RAM Holding · Baku, Azerbaijan

- Triage alerts on the enterprise DLP platform, analysing where, how and by whom sensitive data is used.
- Analyse insider-risk scenarios, including unintentional leaks such as wrong recipients, open links or excessive permissions, and propose improvements to alert configuration.
- Investigate SIEM events in depth by pivoting to FortiAnalyzer and Palo Alto logs, filtering by source and destination IDs to trace the full activity behind an alert.
- Monitor server and network device resources and interfaces in LibreNMS, logging events and escalating alerts delivered via Telegram bot and email for 24/7 tracking.
- Created training content for the company's learning platform for IT and business audiences, including an infographic on the evolution from rule-based systems to autonomous AI agents.

Key projects

- **Local LLM Chatbot —** Independently deployed a local LLM using Llama and LM Studio, integrated it with Telegram, WhatsApp and MCP, and embedded it as a chatbot on a website I built.
- **Speech-to-Text (STT) API for Azerbaijani —** Benchmarked 5 Hugging Face models (SeamlessM4T v2, Whisper variants, Meta MMS) on a real Azerbaijani phone-call recording in WAV and MP4; SeamlessM4T v2 was the most accurate. Built a Python REST endpoint that converts audio with FFmpeg and returns JSON transcripts, and traced API-versus-script output mismatches to missing decoding parameters.
- **Plant-Health Computer Vision Research (Agrohub) —** For Agrohub, an agritech app for farmers, compared 10+ off-the-shelf plant-health APIs (Kindwise, Plantix, Agrio and others) and recommended Kindwise. Tested it in Python on crops grown in Azerbaijan: from a single photo, the API identified the crop and its diseases and returned their names, confidence scores and treatment advice in JSON.

EDUCATION

ADA University

Expected 2030

Bachelor of Science in Computer Engineering · Baku, Azerbaijan

SKILLS

Cybersecurity: DLP monitoring, SIEM log analysis, network monitoring and alerting, insider-risk awareness

Artificial Intelligence: Local LLM deployment, chatbot and MCP integrations, speech-to-text, computer vision APIs, RAG, AI agents

Programming: Python (intermediate): REST API development, model benchmarking scripts, API testing · HTML, CSS (proficient) · Flutter, Dart (intermediate) · JavaScript (beginner) · SQL (basic)

Tools & Platforms: DLP, SIEM, FortiAnalyzer, Palo Alto, LibreNMS, LM Studio, MCP, Hugging Face, FFmpeg, Git, Linux

CONTENT & COMMUNITY

- Author of Azerbaijani LinkedIn posts on AI and cybersecurity, e.g. Generative AI, RAG, agentic AI and insider risk.

LANGUAGES & TEST SCORES

- English — Fluent
- Azerbaijani — Native
- Turkish — Fluent
- Russian — Upper-Intermediate
- **IELTS:** 7.5 (June 2025)
- **SAT:** 1510
